2. With regard to the **language**, all the elements marked above were available or furnished to this Authority in the language in which the international application was filed, unless otherwise indicated under this item.

These elements were available or furnished to this Authority in the following language: , which is:

- ☐ the language of a translation furnished for the purposes of the international search (under Rule 23.1(b)).
- ☐ the language of publication of the international application (under Rule 48.3(b)).
- ☐ the language of a translation furnished for the purposes of international preliminary examination (under Rule 55.2 and/or 55.3).

3. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international preliminary examination was carried out on the basis of the sequence listing:

- ☐ contained in the international application in written form.
- ☐ filed together with the international application in computer readable form.
- ☐ furnished subsequently to this Authority in written form.
- ☐ furnished subsequently to this Authority in computer readable form.

6. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Yes:	Claims	1-14
	No:	Claims	
Inventive step (IS)	Yes:	Claims	1-14

VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted:
see separate sheet

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT - SEPARATE SHEET**

International application No. PCT/EP00/06422

The documents cited in the search report do not give any rise to objections regarding novelty or inventive step.

It must however be remarked that the application does not meet the requirements of Article 6 PCT since the claims are not supported in their full scope by the description.

The working examples make plausible that the epoxidised or maleinised oils are capable of interacting with a curable epoxy resins system and will be able to function as a "built-in" modifier with a positive effect. Claim 1 however covers a multitude of curable systems which are suitable for the uses listed in claim 14 but which have little in common, such as for example anionically curing lactams, photocuring acrylates, radical-curing unsaturated polyesters, acid-curing melamine-formaldehyde adducts, polyurethanes. The modified oils will not necessarily interact with most or all of these systems and will not necessarily have a positive effect. Regarding claim 4 it is noted that there are no working examples which involve polyisocyanates and that it has not been made plausible that the effect which the invention tries to obtain will also be obtained in the case of polyurethane-forming compositions.
